

DEFEAT THE INSIDER THREAT

SPYFORCE-AI

“A bad insider erratically looking up customer credit card information. SpyForce detects suspicious, but ‘authorized’ activity. SpyForce questions the insider, he passes, but is still reported. Insider threat contained, thieves are stopped cold.”

“A hacker steals a password and logs into your network. He behaves suspiciously - differently from the owner of that account. SpyForce detects this and confronts the intruder by questioning. The hacker fails, so SpyForce ejects the thief and keeps him locked out site-wide.”

Pro-Active Internal Security: This is Counter-Espionage Software.
