

Nowell Announces Partner World Program and Upgraded Version 2.0 of Flagship SpyForce-AI Security Product

Austin, Texas – May 2nd 2006 – Nowell today announced the general availability of version 2.0 of its flagship product, SpyForce-AI. SpyForce-AI is a host based anomaly detection/multi-factor authentication security tool geared towards addressing insider threats: detecting and preventing malicious insiders looking to misuse corporate information assets. The product also prevents identity thieves logged on using stolen passwords. According to security industry statistics, financial theft caused by corporate insiders accounts for over 48.5% of financial losses, while external thieves account for 31.7% (National Retail Security Survey)

According to Nowell officials, version 2.0 of the SpyForce-AI software includes new enhancements including an improved graphical user interface, better integration and deployment methods, and an enhanced anomaly detection engine that makes SpyForce-AI better detect users who behave suspiciously. Also, SpyForce-AI can now be fine-tuned to selectively monitor for different types of anomalies in a user account. SpyForce-AI also now supports Microsoft Windows Terminal Services, allowing SpyForce-AI to secure windows users concurrently logged into an instance of Windows Terminal Server.

The latest version has been evaluated extensively. According to one evaluator, “[SpyForce-AI] can be useful in detecting anomalous behavior even with authorized users”. CRN Labs of CRN Magazine, also recently completed an evaluation of the product and it was found to “accomplish its primary goal—containing the insider threat”, according to Frank J. Ohlhorst of CRN Labs.

Also, Nowell today announced the availability of its Nowell World Partner Program, a program that helps members of the sales and marketing channel to resell SpyForce-AI for decent margins. The partner program involves training, support, implementation and maintenance for approved partners and their customers.

Mr. Omon Edeki, President and Chief Executive Officer of Nowell said, “SpyForce-AI is slowly and steadily gaining marketplace acceptance. Moving forward, we are delighted to offer version 2 to address the enterprise’s insider threat security and regulatory needs. We believe that our offerings are unmatched in the industry and will eventually help the enterprise enforce internal security policies”.
