

Nowell Releases Shalom Security Platform

Security Software Protects Corporations against Insider Threats, Identity Theft and Internal Fraud

Austin Texas—April 15 2009—Nowell today announced that it is releasing the Shalom Security Platform, software that helps corporations protect their information assets against insider threats, internal fraud and identity theft. Shalom Security Platform is a cloud-based security service that will help businesses manage the financial risks associated with insider threats, fraud and identity theft. Shalom works using advanced techniques in real time anomaly detection and intelligent multifactor authentication. Shalom is able to automatically learn how users behave and it detects real time suspicious behavior by user account holders. It also prevents identity theft, and identity phishing using intelligent authentication.

The Shalom security platform offers the latest developments in information security technology, including:

- Adaptive Anomaly Detection for Fraud detection
- Scalability Support Allowing Solution to support up to 20,000 users per server
- Redundant Backup feature that allows uninterrupted service in the event of server failure
- Implementation of AES 256-bit Strong Encryption across product suite which is the standard for protecting top secret and classified US government information
- Improved Authentication Server that supports several languages including Spanish, French, English, Romanian, Swedish and other Latin based languages
- Improved Graphical User and Reporting Interface that uses the QT-GUI framework for advanced graphical representation of real time internal security events
- Implementation of a reliable cloud based infrastructure that allows clients to deploy solution using a cloud/saas/hosted model for easier deployment

According to Omon Edeki, Chief Executive Officer of Nowell,

“Without a question, this is the most advanced and mature release to date. Enterprises both large and small will immediately see improvements to their internal security posture by adopting the Shalom Security Platform.”
