BPM Software and Integration
Services

About us

Nowellgroup specializes in assisting both small and large businesses implement cloud software solutions to improve their operations, reduce their risk posture and drive successful outcomes in various aspects of their operations from HR, to supply chain, customer service and maintenance while in production. By digitizing their standard operating procedures, companies that work with us have realized performance gains and cost savings. Applicable to healthcare, real estate, insurance, financial services, manufacturing, small and mid size businesses

"A partner you can trust"

Our commitment

We are committed to your success from start to finish, operating with the highest standards of integrity and professionalism

Verity BPM Software

Agile supply chain, risk management, integrated policy workflows for flex safety design for the teamcentric enterprise: flex supply logistics, flow safety and quality design

How do we develop and sustain a highly efficient, agile supply chain that, meets customer needs and at the same time reduces waste and excess? Optimizing and making sense of distribution, asset maintenance, industrial fleet, facilities, IT assets, merchandise inventory, worksite equipment and their real time distribution and continued maintenance can be a challenge for any business. In addition, it's important to assure that equipment and processes meet useful minimum standard of quality in order to guarantee safety, and reliability. Our software is useful for coordinating the supply chain, availability and risk management challenges of complex scenarios. The solution helps teams implement operational policy workflows that simplify business processes

DIGITAL SUPPLY CHAIN RISK MANAGEMENT AT ITS BEST

Verity BPM software is a cloud based software solution that offers integrated solutions that addresses these needs in a simple fashion. With Verity software operators can define their entire operational and distribution centers or warehouses, define the specifications of the products contained in these worksites, and in addition, Verity software allows users to model real time distribution, packaging and movement of these freight objects from site to site, while taking into account freight costing and basic freight accounting; In addition the solution provides an information platform to co-ordinate digital inspections, maintenance and checkups to assure top performance

Verity BPM Supply chain risk management, supports comparative analysis, availability, search, inspections and digital quality control

MORE THAN JUST DIGITAL LOGISTICS AND DIGITAL SUPPLY CHAIN

With Verity software, the team can make strategic decisions regarding supply and demand, allocation, risk management, budgeting, and future planning. With Verity we can determine when product stock is running low and needs replenishment; in addition we can perform historical analysis to determine trends. Examples of predictive analytics: an industrial power manufacturer determines that during the hot summer months, more gas is used as a result of higher cooling costs, triggering increased consumption of gas resources transferred to the end consumer which translates to increased demand. An auto manufacturer shop, during the hot summer months, hotter weather means more friction and wear and tear for car tires which means increased likely hood of customers replacing their car tires. With Verity software, users can look at their historic data and plan for future spikes in demand during the summer to ship an increased number of that product to meet the demand during that time frame. IT departments also use BPM software to manage critical IT operations like upgrades, backups, data and application migration and resilience operations

HOW ABOUT DIGITAL FLOW SAFETY DESIGN, QUALITY, & SUPPLY CHAIN RISK MANAGEMENT?

In the area of operational safety design and quality management, Verity allows field and worksite personnel to define safety design workflows, for any kind of equipment, to assure that the digital equipment meets

specific safety inspection criteria. This can be used to assure that equipment or heavy parts, or inventory is diligently inspected and properly maintained. An example of a use case is an electric grid operators in an emerging country that suffers from periodic power failure due to broken wires, or poorly maintained power transformers. Verity Software allows the operators to design periodic safety design work flows for that specific power transformer where the engineer can follow the inspection work flow and generate a safety inspection run result.

From this data operators can determine if the transformer needs to be maintained, checked up, or repaired before it goes off line. In addition this software can be used to develop safety design flows for any type of industrial equipment or part or machinery; Verity also supports financial accounting of these maintenance inspections, that way we can more accurately measure. The result of this is improved performance, less risk or chance of equipment failure, improved performance, budgeting and much more

PRODUCT SPECIFICATIONS

Private cloud delivery model, Stable support for RHEL/CentOS 7-64bit; Database: MySQL v8.0, or Oracle 12c. OpenSSL AES-256 Cryptographic Security. Application server can be hosted on premise, or hosted by any cloud hosting provider;

win-win**

Summary

Our goal is your success With a track record of go-live experience, project deliveries and success, today, we develop BPM life-cycle software solutions to manage complex business, meet regulatory requirements such as (COBIT, HIPAA, PCI, SOX, OSHA) and streamlining teams looking to optimize business process efficiency in their supply chain. We also offer technical consulting services and fully packaged cloud software

Business process management software

Using our software platform called Verity BPM to define your key sops, manage service delivery and operations service management linked to financials

Supply chain software

Verity BPM has supply chain, inventory management, customer experience and service management features

ITSM integrations, cloud identity and access management

We have experience with SailPoint identity access management software as well as integration expertise with ServiceNow
